

## **KEYBOARD AND METHOD OF MAKING THE SAME**

### Abstract of the Disclosure

A method and an apparatus for communicating data to a remote device, the apparatus comprising a keyboard having a plurality of keys. The lower surface of the keyboard is attached to an object along at least a portion of the lower surface of the keyboard. The object is adapted for providing a cushioned region between the keyboard and a resting-place. The remote device comprises at least one of a personal computer (PC), television (TV), an organizer, cable box, satellite receiver, and radio or stereo equipment. The resting-place is typically a portion of a human body, such as a lap or thigh region, or palm(s) of a hand(s). The keyboard communicates to the remote device via a wired or wireless link to allow use at home, hotel, or office.
